

Summary

The video tell us about the importance of don't be scared about trying different things on the app's doing process. Nowadays there are a lot of features in the devices that we use, like a camera, geolocation, altimeter, etc., so we must try that our code implements all of this.

There are a lot of programming codes, so we must choose the one which we are more comfortable, and then try and try in our prototypes to solve the errors that can appear. We must know that the cicle of create new apps is to begin on the design, prototype, test and finally validate.

For the last, we must be attentive about the market in which our application goes directed, and invest there.
